Protein coding regions (CDS) have been predicted with the help of computer analysis using the Genefinder program in Pombase (an ACEDB database) with additional predictions for the branch-acceptor sites supplied by the program spisplice. CAUTION: It is possible that for any individual CDS we may have underestimated or overestimated the number of introns/exons or we may not have chosen the correct splice donor/acceptor sites. CDS are numbered using the following system eg SPBC25H2.Olc. SP (S. pombe). B (chromosome 2), c25H2 (cosmid name). Ol (first CDS), c (complementary strand). The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.
IMPORTANT: This sequence MAX NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid c14C8 is overlapped at the 3' end by c15C4. Details of yeast sequencing at the Sanger Centre are available on the World Wide Web. (URL, http://www.sanger.ac.uk/Projects/S_pombe/)
During 1995 to 1996 about 66% of S. pombe chromosome I was sequenced by the Sanger Centre. The sequencing of the S. pombe genome is now being continued with funding from The European Commission. Fourteen European sequencing laboratories, including the Sanger Centre, are participating in the project.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2261. .2284

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions

Cambridge CB10 IRQ, England e-mail: rw@nematode.wustl.edu and jes@sanger.ac.uk

IROPTFSQPISEELESKYGK"

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone

# NEIGHBORING COSMID INFORMATION:

cosmid is CO9D1, 13199 bp overlap;3' end lies in a gap. start of this cosmid is at base position 197 of CELC24G7; end is at 46996 of CELC24G7 The 5' Actual actual

#### NOTES:

Coding sequences below are predicted from computer analysis, using the program Genefinder(P. Green and L. Hillier, ms in preparation). Location/Qualifiers 46996 FEATURES

Submitted (11-SEP-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Oct 16, 1999 this sequence version replaced gi:5881454.

* NOTE: This is a "working draft' sequence. It currently consists of 23 contigs. The true order of the pieces are in not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                               r chromosome 3L/71F1 clone RPC198-21K15,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     le.

Mo 108. USA
Mo 11099 this sequence version replaced gi:4263446.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pleces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                    Caenorhabditis elegans.

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Erra D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Clone RG011J21 is from the first release of the human BAC library CITB-978SK-B. The library contains cloned DNA from the male fibroblast cell line 978SK. See: Shizuya et al., Proc. Natl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

* NOTE: This is a "working draft' sequence. It currently

* consists of 4 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* truns of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

**NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          - 13-NOV-1997

Cloning of a cDNA encoding the human cation-dependent mannose 6-phosphate-specific receptor broc. Natl. Acad. Sci. U.S.A. 84 (16), 5575-5579 (1987) 87289647

The protein is a presumptive prepropeptide, though the cleavag site for the mature peptide was not determined. Draft entry and computer readable copy of sequence [1] kindly provided by K.von Figura, 01-OCT-1987.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /gene="M6PR"

Colim 4; Pred-only memory (RoM) or CD-ROM, Homology searches using medium, preferably selected from a floppy or hard disk, random access of the invention. The DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The collypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences of computer readable medium.

Computer readable medium.

Nucleic acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. food, faces or pattent samples
Claim 6; Fig 8; 165pp; English.
This is the nucleotide sequence of a gene cluster involved in the biosynthesis of the Escherichia coli o157 O antigen. The class of the Escherichia coli o157 O antigen. The class of the Escherichia coli o157 O antigen. The class of the Escherichia coli o157 O antigen gene sequences. 12 Open reading frames within the gene cluster were identified on the basis of homology to known sequences. The genes encode proteins (see W88312-23) involved the gene cluster were identified on the basis of homology to known sequences. The genes encode proteins (see W88312-23) involved the cluster were identified on the polysaccharide antigen and in the transport or processing of polysaccharide antigen and in the transport genes, particularly wbd (transferase), wax assembly and transport genes, particularly wbd (transferase), wax clisters improves the specificity of methods for the detection and identification of o antigen gene clusters improves the specificity of methods for the detection and identification of on antigens, e.g. in tests of food or faecal derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhadic collitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Figure and rabbit DNA sequences encoding GNT I enzymes - for converting mannose to hybrid and complex N-glycan(s) Claim 3; Fig 4; 57pp; English.

Rabbit liver GNT I was purified and digested with pepsin, then trypsin. The peptide fragments were sequenced and used to design degenerate PCR primers (see Q30220-5). cDNA was prepared from total RNA from rabbit liver. PCR was carried out on the cDNA preparation. One of the two PCR products was cloned into the Smal site of pGEM7z for sequencing and then used as a riboprobe. The riboprobe was used to screen a rabbit liver cDNA library in lambda gtl0. claim 1; Pages 40 41; 67pp; Japanese.

This represents a floral organ-specific chitinase encoding gene sequence along with a floral organ-specific promoter sequence. The promoter derived from rice associated with chitinase is specific to floral organs and allows expression of genes in the flower parts of monocotyledonous plants. The expression of desired genes specifically in the floral parts
                                                                                                                                                                                                                                                                                                                                                                                                    V49983;

insert in a positive clone was 1.6kb. An 80bp riboprobe was prepared from the 5'-terminal of the 1.6kb insert and used to rescreen the library. The largest cDNA insert was cloned into pGEM-7z to obtain pGEM-7z-rcgntl. The full-length rabbit GNT coding sequence was eventually obtained from overlapping clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Promoter sequence associated with chitinase, specific to floral organs - allows expression of genes in the flower parts of monocotyledonous plants

PR New antl-analydenic peptides - comprise N-terminal fragments of human piacental lactogen, human growth hormone, growth hormone variant of borsonscutive amino acids selected from the N-terminal end of human piacental lactogen (hEL), human growth hormone (hGH), growth commone variant (hGH V), or human prolactin such peptides (1) inhibit compliants on expectific receptor which does not bind an intact full length hormone variant (hGH V), or human prolactin such peptides (1) inhibit and glogenesis in chick chorloallantoic membrane and (iii) binds to at least one specific receptor which does not bind an intact full length of HGH, hbt., prolactin or hGH-V. The invention also describes a method for congenial to probable abnormality of placental vascularisation diring propable abnormality of placental vascularisation diring propable abnormality of placental vascularisation diring congenes.

CC diagnosing a probable abnormality of placental vascularisation disease in a subject, for inhibiting tumour formation or growth in a patient or for a subject, for inhibiting tumour formation or growth in a patient of peptides can be used for preventing or treating e.g. malignant tumours, and cascularisation of growth and signature peptides can be used for preventing or rethingations such as rheumatod and placents of architecture, voelar would healing proliferative rethingations such as rheumatode contributions. The propagent of and choricoartonma, retrolental fibroplasia, scleroderma, solid tumours, uveitis, and reproductive disorders such as follicular and luteal cycle and choricoartonma, they can also be used as contraceptive agents. DNA encoding the peptides can be used in agene therapy. The measurement of abnormal levels of N-terminal fragments of the proper parameter of and choricoartonma. They can also 
              wound healing; proliferative retinopathy; macular degeneration; trachoma; granulation; glaucoma; ocular; uveitis; fracture; Osler-Weber syndrome; psoriasis; fibroplasia; scleroderma; Kaposi's sarcoma; vascular adhesion; ulcer; leukaemia; reproductive disorder; contraceptive agent; gene therapy; pre-eclampsia; intrauterine growth retardation; placental dysfunction; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-JUN-1999 (first entry)
Rice anthranilate synthase first isozyme alpha-subunit DNA fragment.

This invention describes a novel rice anthranilate synthase first isozyme alpha-subunit. The encoding DNA can be used to produce transformant plants and seeds, of e.g. rice, maize or wheat, with enhanced tryptophan content and nutritional value of the crops. Sequence 1498 BP; 343 A; 362 C; 404 G; 389 T;
maize; wheat; tryptophan content; nutritional value; ss. Oryza sativa.

Rice anthranilate synthase first isozyme alpha-subunit DNA.
Anthranilate synthase; alpha-subunit; ASA: rice; isozyme; plant; seed;
maize; wheat; tryptophan content; nutritional value; ss.
DNA encodes "a-subunit of first isozyme of rice anthranilate synthase - used for improving tryptophan production and nutritional value of crops. e.g. rice, maize or wheat claim 8; Page 142-145; 152pp; Japanese.

This invention describes a novel rice anthranilate synthase first isozyme alpha-subunit. The encoding DNA can be used to produce transformant plants and seeds, of e.g. rice, maize or wheat, with enhanced tryptophan content and nutritional value of the crops.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length: 10

Claim 1; Page 16-26; J6pp; English.

The present sequence represents human OCIF genome DNA which is specifically claimed in the present invention. The present sequence represent human OCIF genome DNA which is specifically claimed in the present invention. The present invention describes: (1) a method of inhibiting the formation of osteoclasts and/or antipyretic proteins, which have the following characteristics: (1) MW determined by SDS-PAGE of approximately 60 kDa under reducing conditions, and 60 kDa and 120 kDa under non-reducing conditions; (1) a sequence (III) (see W53239); (iii) affinity to cation exchangers and heparin; (iv) its osteoclast formation inhibiting activity reduced by heating at 70 degrees Celsius for 10 minutes or 56 degrees Celsius for 10 minutes, and (v) its antipyrestic activity reduced by heating at 90 degrees Celsius for 10 minutes, and (z) a method for preparing the above proteins. The proteins are useful for, e.g. treatment and consequence of osteoporosis, rheumatism or multiple sclerosis, and also as antigens for immunological diagnosis of these diseases and disorders. A10269-X12937 are human DNA fragments which contain biallelic polymorphic CC markers which have been isolated using the primers represented in CX 09121-X10268. The base occupying the primers respecanted in CX 09121-X10268. The base occupying the polymorphic site is indicated by the appropriate IUPAC-IUB ambiguity code. These fragments can be used in CX 09121-X10268. The base occupying the polymorphic typing for use in entity didual for use in CC e. g. forensics, paternity testing or for phenotypic typing for diseases such as agammaglobulinemia, diabetes insipidus, Lesch-Nyhan syndrome, CC muscular dystrophy, Wiskott-Aldrich syndrome, Fabry's disease, familial chypercholesterolemia, polycystic kidney disease, hereditary cycloshis, von Willebrand's disease, tuberous scierosis, hereditary cycloshis, von Willebrand's disease, tuberous scierosis, hereditary haemorrhagic telanglectasia, familial colonic polyposis, Ehlers-Danlos
                                                                                   WPI: 95-131177/17.

WPI: 95-131177/17.

WPI: 95-131177/17.

PFDB: R71384.

WP class of semaphorin peptide(s) and polypeptide(s) - are potent modulators of nerve cell growth and regeneration are potent modulators of nerve cell growth and regeneration.

X20248 to X20402 represent polynucleotide sequences isolated from Borrella burgdorfer! (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of blosynthetic products, e.g. enzymes. Borrella belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrella causes epidemic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                             Borrelia burgdorferi polynucleotide sequence #11.

syndrome, osteogenesis imperfecta, acute intermittent porphyria, autoimmune diseases, inflammation, cancer, diseases of the nervous system, infection by pathogenic microorganisms, and characteristics such as longevity, appearance (e.g. baldness, obesity), strength, speed, endurance, fertility, and susceptibility or receptivity to particular drugs or therapeutic treatments. The isolated polymorphic nucleic acid segments can also be used to produce medicaments for the treatment or prophylaxis of such diseases.

Sheared DNA-22K17.TF Sheared DNA Trypanosoma brucei genomic clone
Sheared DNA-22K17, genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Email: nelsayed@tigr.org
Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
Clones are derived from the TrgR. Clones will be available for
distribution through ATCC. Sheared DNA end sequences search page:

The sequence tag present in the CDNA between the NotI site and the oligo-dr track served to verify it as a clone from the non-normalized hypothalamus library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP CDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP CDNA clones, this record will be updated accordingly when that means is determined. Seq primer: MI3 Forward

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to identify it as a clone from the normalized pineal glands library cDNA Library Preperation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. POLYA-YES.

The driver used for subtraction consisted of a pool of 5,000 clones from the NIH_BMAP_M.S.1 library and a pool of 5,000 clones obtained from non-normalized and normalized mouse brain

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracelular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                         The immunomodulating dimer peptide(s) - based on a Class I HiA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimune diseases.

Trample 1: Page 198 and W33778-9 were assayed for their immunomodulating cativity. A peptide-type compound or variant is claimed which has a citivity. A peptide-type compound or variant is claimed which has cativity. A peptide-type compound or variant is claimed which has compound activity, including the N-terminal acylated and/or creminal amidated or estavitied forms of up to 60 anino acids, where the peptide-type compound comprises the formula: A-B, where A, B = CC (R aa76-71) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = CC Small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino acid sequences in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HiA-B alphal domain (positions of a tany peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HiA-B alphal domain (positions of 19-84). They can be used to inhibit the proliferation of interest to cativate CTLS. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLS. They can also inhibit the proliferation of reliance of transplants or for treating autoimmune diseases, e.g. diabetes, and also he was a starthritis and lupus erythematosis. The products can also be used for preventing relection and also he was a condition and also he was a c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 17; Page 35; 41pp; English.
This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
19-JUN-1998 (first entry)
Peptide B2702.84-79/79-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autodimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-JUN-1998 (first entry)
Immunomodulating dimer peptide #3.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New immunomodulating dimer peptide(s) - based on a Class I HLA-1 alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 48; DB 1; Length 12;

claimed which has immunomodulating activity, including the N-terminal actypated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B -(R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a pydrophobic or small amino acid; aa80 = I or N; aa81 = G or R; and are represents amino acid; aa82 = R or L; aa83 = G or R; and are represents amino acid; The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (7TL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proliferation of I cells in response to anti-CD3. The peptide can be proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus errythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R82907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to abuther administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Clayberger C, Krensky AM, Parham P;
WPI; 95-358582/46.
Extension of acceptance period of transplants from MHC unmatched
donor hosts - using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

The compensation of cris.

Tomposes. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of Cris.

Example 12, 20pp; English.

RS413, and RS5415.R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the than 18702 84-75-84 palindrome. These sequences can be used to isolate the protein associated with T-cell activation in mammalian T-cells, and is a liam uncologically cross reactive with the heat shock protein Hsc70. Protein associated with T-cell activation in mammalian T-cells, and is a liam to all mitted number of cell types, but is particularly cypressed on B and T cells. Pl4 can be isolated by lysis of a suitable expressed on B and T cells. Pl4 can be isolated by lysis of a suitable column containing a covalently bound HiA-B2702 palindromic peptide.

Column containing a covalently bound HiA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with HA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the mount of binding between the candidate composation containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ï

treating autoimmune diseases

Claim 16; Page 35; 41pp; English.

Claim 16; Page 35; 41pp; English.

Claimed which has immunomodulating activity including the N-terminal acylated and/or c-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V, aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa80 = I or N; aa31 = G or R; and as represents amino acid; The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B compounds comprise amino acid sequences related to a class I HLA-B compounds (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antiqenic peptides or proteins of Interest to activate CTLs. They can also inhibit the cused for preventing rejection of transplants or for treating autoimmune cused for preventing rejection of transplants or for treating autoimmune cused for preventing rejection of transplants or for treating autoimmune cused for preventing rejection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New prostaglandin E receptor protein and DNA encoding it - used to study prostaglandin binding, agonists and antagonists etc. Claim 5, 10; Figure 4; 22pp; English.
The prostaglandin E receptor can be used to clone other PGE receptor genes, to clarify the structure of PGE receptors, to elucidate the function of PGE and to identify PGE agonists/ antagonists. The receptor is produced by recombinant methods,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .;

transforming a host cell, culturing the cell and retrieving the recombinant protein from the culture medium. This PGE2 receptor is a derivative of the clone MP660 (046124) having 89 base pairs deleted from the coding sequence resulting in replacement of 30 C-terminal amino acids with a different sequence of 26 amino acids. Sequence 361 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /label- Phosphorylation site.
/note- Phosphorylation is by cAMP protein kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New prostagiandin E receptor protein and DNA encoding it - used to study prostaglandin binding, agonists and antagonists etc. Claim 10; Figure 1; 22pp; English.

The prostaglandin E receptor can be used to clone other FGE receptor genes, to clarify the structure of FGE receptors, to elucidate the function of FGE and to identify FGE agonists/ antagonists. The receptor is produced by recombinant methods, transforming a host cell, culturing the cell and retrieving the recombinant protein from the culture medium.
                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New prostaglandin EP3 receptors and DNA - used partic. to identify medulators of prostaglandin receptor activity for transment of diseases.

Claim 2; Page 43-45; 64pp; English.

Claim 2; Page 43-45; 64pp; English.

The sequence represents a human uterus prostaglandin-EP3-9

Transment of mil. wt. 40,507). The sequence contains 4 conserved

N-glycosylation sites in putative extracellular regions, and a conserved region (R69515) in transmembrane region-VII common to other EP3 receptors. Conserved Aps residues are found in exofacial loops I and 2, and a conserved Aps found in all elocation in any be used to identify receptor-agonists and receptor-antagonists, for use in therapy of e.g. glaucoma, side-effects of non-steroidal antilniammatories, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

New human prostaglandin EP3 receptor(s) - useful for treatment and prevention of, e.g. inflammation

Drevention of, e.g. inflammation

Drevention of, e.g. inflammation

Everyther and a sequences.

This represents a human EP3-VI receptor. A replication or expression vector comprising cDNA sequences encoding EP-3V or EP3-3VI can be used to transform a host cell. The host cell is cultured and the polypeptides can be recovered from the culture medium. The polypeptides combine specifically with a prostaglandin PGEZ receptor and can be used as a preventive and treating agent for inflammation.
                                                                             New prostaglandin EP3 receptors and DNA - used partic. to identify modulators of prostaglandin receptor activity for treatment of diseases.

Treatment of diseases.

Claim 2: Page 40-41: 64pp: English.

Claim 2: Page 40-41: 64pp: English.

The sequence represents a human kidney prostaglandin-EP3-alpha receptor (mol. Wt. 43.315). The sequence contains 4 conserved normalizes in putative extracellular regions, and a conserved region (R69515) in transmembrane region-VII which has been used to generate a probe for isolation of other EP3 receptor genes. Conserved Arg found in all eicosanoid receptors is found in transmembrane region-VII. The receptor molecular and receptor-agonists and receptor-antagonists, for use in therapy of e.g. glaucoma, side-effects of non-steroidal antiinflammatories,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Claim 2: Page 42-43; 64pp; English.

Claim 2: Page 42-43; 64pp; English.

The sequence represents a human uterus prostaglandin-EP3-21

The sequence contains 4 conserved

C N-glycosylation sites in putative extracellular regions, and a conserved region (R69515) in transmembrane region-VII common to other EP3 receptors. Conserved Cys residues are found in other EP3 receptors. Conserved Cys residues are found in exceptoral loops 1 and 2, and a conserved Arg found in all elocation receptor any be used to identify receptor agonits and creceptor any be used to identify receptor agonits and creceptor any be used to identify receptor agonits and conserved Cys receptor any be used to identify receptor agonits and conserved cys receptor and conserved cys glaucoma, side-effects of non-steroidal antiinflammatories, cancer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                 New human prostaglandin EP3 receptor(s) - useful for treatment and prevention of, e.g. inflammation (claim 2) Pages 16-17; 27pp; Japanese.

This represents a human EP3-V receptor. A replication or expression vector comprising cDNA sequences encoding EP-3V or EP3-3VI can be used to transform a host cell. The host cell is cultured and the polypeptides can be recovered from the culture medium. The polypeptides specifically with a prostaglandin PGE2 receptor and can be used as a preventive and treating agent for inflammation.

PW-53, a clone of infectious attenuated Dengue 2 virus strain 16681

- also chimeric DEN-2/1, DEN-2/3 and DEN-1/4 viruses, used as a quadravalent vaccine for protecting against Dengue virus infection class claim 27; Page 122-136; 261pp; English.

This sequence represents the polyprotein from attenuated Dengue 2 virus, strain 16681. The attenuated virus is designated PDK-53. The polyprotein comprises the capsid, prM, M, E, NS1, NS2A, NS2B, NS3A, NS4A, contain comprises the capsid, prM, M, E, NS1, NS2A, NS3A, NS4A, contains and not be used in the production of quadravalent vaccine which provides immunity against all four serotypes of dengue virus. The vaccine also comprises a chimeric DEN-2/4 virus, and/or a chimeric DEN-2/4 virus. The new quadravalent vaccines are used to protect against infection by all four serotypes of dengue virus, DEN-1, DEN-3 and DEN-4, which can lead to dengue fever or fatal dengue hemorrhagic fever/dengue shock syndrome (DHF/DSS). Host cells are used to produce the recombinant protein products of the DNA constructs of common and the component of the component of the constructs of common and the component of the component of the constructs of the component of commonent of the component of commonent of the component of commonent 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-SEP-1997 (first entry)
